Jerry Athavan R.G

Email: jerryathavan7@gmail.com • LinkedIn: linkedin.com/in/jerry-athavan-r-g • Portfolio: https://jerryathavan-portfolio.vercel.app

Professional Summary

Computer Science graduate (fresher) skilled in building full stack web applications with React.js, Tailwind CSS, Python, FastAPI, and Java. Experienced in creating responsive websites, REST APIs, and database-driven systems. Built and deployed a live company website and worked as a frontend trainee on real client projects. Quick learner, comfortable working across frontend and backend, and eager to contribute to a development team.

Skills

- Frontend: HTML, CSS, JavaScript, React.js
- Backend: Python, Java, FastAPI
- Database: MySQL, PostgreSQL
- Tools: Git & GitHub, Vercel, JWT Auth, IntelliJ IDEA, PyCharm, VS Code, Postman
- Concepts: OOP, Data Structures, Algorithms, Responsive Design

Experience

Frontend Development Trainee – La Vigroh

(Pursuing Internship)

- Developed the company's portfolio website from scratch using React.js and Tailwind CSS — implemented a dark/light theme toggle with saved user preference, made it fully responsive across mobile, tablet, and desktop, purchased a domain, and hosted the website live on it.
- Applied the same responsive design principles to UfileFbar, the company's tax-compliance platform, contributing frontend improvements as a trainee under a senior developer.
- Arranged and organized project meetings, coordinating updates between team members.

Projects

Student Management Application – Full Stack Project

(FastAPI + MySQL + React.js + JWT Auth)

- Developed a full stack system with a FastAPI backend, MySQL database, and a React.js frontend.
- Implemented secure login with JWT and role-based access across 3 user roles (Admin, Teacher, Student), with email verification.
- Built 3 role-based dashboards with full CRUD operations (Create, Read, Update, Delete) and real-time filtering.

Smart Assistive Glass for Visually Impaired – Team Project

(Python + Computer Vision + Text-to-Speech)

- Built a smart assistive device prototype with 4 core features: text detection, speech output, face recognition, and obstacle detection.
- Used Python libraries to convert detected text into audio through Text-to-Speech.
- Collaborated in a team, working closely with members handling computer vision and hardware integration.

Hackathon Experience

National Level Hackathon – *Syed Ammal College of Engineering*
April 2025

- Contributed to development of a Healthcare Monitoring Application prototype.
- Worked on backend components using Java and SQL.

Education

B.E Computer Science and Engineering - *PSRR College of Engineering, Sivakasi*
Nov 2022 – May 2026

- CGPA: 8.13
